

# AP Macroeconomics: Unit 4 Terms

## Glossary

### Chapter 26

<b>bond</b>	a certificate of indebtedness
<b>budget deficit</b>	a shortfall of tax revenue from government spending
<b>budget surplus</b>	an excess of tax revenue over government spending
<b>crowding out</b>	a decrease in investment that results from government borrowing
<b>financial intermediaries</b>	financial institutions through which savers can indirectly provide funds to borrowers
<b>financial markets</b>	financial institutions through which savers can directly provide funds to borrowers
<b>financial system</b>	the group of institutions in the economy that help to match one person's saving with another person's investment
<b>market for loanable funds</b>	the market in which those who want to save supply funds and those who want to borrow to invest demand funds
<b>mutual fund</b>	an institution that sells shares to the public and uses the proceeds to buy a portfolio of stocks and bonds
<b>national saving (saving)</b>	the total income in the economy that remains after paying for consumption and government purchases
<b>private saving</b>	the income that households have left after paying for taxes and consumption
<b>public saving</b>	the tax revenue that the government has left after paying for its spending
<b>stock</b>	a claim to partial ownership in a firm

### Chapter 27

<b>compounding</b>	the accumulation of a sum of money in, say, a bank account, where the interest earned remains in the account to earn additional interest in the future
<b>diversification</b>	the reduction of risk achieved by replacing a single risk with a large number of smaller, unrelated risks
<b>efficient markets hypothesis</b>	the theory that asset prices reflect all publicly available information about the value of an asset
<b>finance</b>	the field that studies how people make decisions regarding the allocation of resources over time and the handling of risk
<b>firm-specific risk</b>	risk that affects only a single company
<b>fundamental analysis</b>	the study of a company's accounting statements and future prospects to determine its value
<b>future value</b>	the amount of money in the future that an amount of money today will yield, given prevailing interest rates
<b>informational efficiency</b>	the description of asset prices that rationally reflect all available information
<b>market risk</b>	risk that affects all companies in the stock market
<b>present value</b>	the amount of money today that would be needed, using prevailing interest rates, to produce a given future amount of money
<b>random walk</b>	the path of a variable whose changes are impossible to predict
<b>risk aversion</b>	a dislike of uncertainty

### Chapter 29

<b>central bank</b>	an institution designed to oversee the banking system and regulate the quantity of money in the economy
<b>commodity money</b>	money that takes the form of a commodity with intrinsic value
<b>currency</b>	the paper bills and coins in the hands of the public
<b>demand deposits</b>	balances in bank accounts that depositors can access on demand by writing a check
<b>discount rate</b>	the interest rate on the loans that the Fed makes to banks
<b>federal funds rate</b>	the interest rate at which banks make overnight loans to one another
<b>Federal Reserve (Fed)</b>	the central bank of the United States
<b>fiat money</b>	money without intrinsic value that is used as money because of government decree
<b>fractional-reserve banking</b>	a banking system in which banks hold only a fraction of deposits as reserves
<b>liquidity</b>	the ease with which an asset can be converted into the economy's medium of exchange
<b>medium of exchange</b>	an item that buyers give to sellers when they want to purchase goods and services
<b>monetary policy</b>	the setting of the money supply by policymakers in the central bank
<b>money</b>	the set of assets in an economy that people regularly use to buy goods and services from other people
<b>money multiplier</b>	the amount of money the banking system generates with each dollar of reserves
<b>money supply</b>	the quantity of money available in the economy
<b>open-market operations</b>	the purchase and sale of U.S. government bonds by the Fed
<b>reserve ratio</b>	the fraction of deposits that banks hold as reserves
<b>reserve requirements</b>	regulations on the minimum amount of reserves that banks must hold against deposits
<b>reserves</b>	deposits that banks have received but have not loaned out
<b>store of value</b>	an item that people can use to transfer purchasing power from the present to the future
<b>unit of account</b>	the yardstick people use to post prices and record debts

### Chapter 30

<b>classical dichotomy</b>	the theoretical separation of nominal and real variables
<b>Fisher effect</b>	the one-for-one adjustment of the nominal interest rate to the inflation rate
<b>inflation tax</b>	the revenue the government raises by creating money
<b>menu costs</b>	the costs of changing prices
<b>monetary neutrality</b>	the proposition that changes in the money supply do not affect real variables
<b>nominal variables</b>	variables measured in monetary units
<b>quantity equation</b>	the equation $M \times V = P \times Y$ relates the quantity of money, the velocity of money, and the dollar value of the economy's output of goods and services
<b>quantity theory of money</b>	a theory asserting that the quantity of money available determines the price level and that the growth rate in the quantity of money available determines the inflation rate
<b>real variables</b>	variables measured in physical units
<b>shoeleather costs</b>	the resources wasted when inflation encourages people to reduce their money holdings
<b>velocity of money</b>	the rate at which money changes hands
